

Active Ingredient: Difenacoum
Outstanding Bait Acceptance

- Difenacoum - the first new active in the United States in 16 years
- Kills warfarin-resistant rats
- Lower primary toxicity - Di-Kill is less toxic than other bait to non-target animals
- Hard-hitting anticoagulant - may kill rats and mice in a single feeding, with first dead rodents appearing 4-5 days after treatment begins
- Palatable formulation made from food-grade ingredients
- Gnawing edges improve acceptability
- Outstanding control of mice - it takes over 2 times as much Bromadiolone to kill mice than with Di-Kill

Di-Kill Blocks

Di-Kill Blocks have a very attractive formulation to increase rodent palatability. They also are made with gnawing edges to encourage consumption.

Item #373425

Bulk Blocks - 9 lb Pail

Item #373426

Bulk Blocks - 18 lb Pail

Di-Kill Pellets

Paper pouch contains pellets for rodent control. Rodents eat through the packaging - no need to open the pouch and distribute pellets.

Item #373421

43 g Place Packs - 100 Per Pail

Item #373420

Bulk Pellets - 10 lb Pail
